2. Company Overview & Identity

Who We Are The Data Island (TDI) is a premier provider of **Vision AI solutions** and **Staff Augmentation**, founded in 2023. We bridge the gap between human intelligence and machine learning. We do not just experiment with technology; we build production-grade AI systems, provide high-precision data annotation, and supply elite engineering talent to global enterprises. While we excel in Generative AI, our core expertise lies in transforming visual data into actionable business insights.

Our Mission & Vision Our mission is to empower organizations with precise Vision AI tools and world-class engineering talent to solve real-world problems. Our vision is to create a future where accurate, unbiased, and accessible visual intelligence is integrated into every industry, driven by a borderless workforce.

Our Core Values

We operate on six core values:

- **Precision First:** We strive for pixel-perfect accuracy because "good enough" is not enough in AI.
- **Uncompromising Quality:** We maintain rigorous QA standards for every dataset and line of code.
- **Deadline Commitment:** We respect roadmaps and deliver on time, every time.
- **Integrity:** We handle sensitive data with the highest ethical standards.
- **Innovation:** We build the tools that set trends rather than just following them.
- **Borderless Collaboration:** We believe talent is global and connects the best minds to the biggest challenges.

Leadership & Advisors Our strategic vision is driven by **Riyadh Hossain** (Co-founder & CEO) and **Intisar T. Naheen** (Co-founder & COO). Our technical and research direction is headed by

Ishtiaque Ahmed (Director of AI). The advisory panel includes **Aasim T. Motin** (Financial Director), **Tanzir Rahman** (Product Lead), and **Rusho Islam** (Data Scientist).

Operational Scale & Stats We operate at a massive scale to support enterprise needs. We have over **30+ AI Engineers** and **200+ trained Data Annotators**. We have successfully handed over **25+ projects**. Our systems audit over **500,000 retail outlets** annually and process over **12 Terabytes** of visual data per year. Our annotation teams can process **120,000+ images per month** per unit with 99% quality assurance. We offer **24/7** global engineering and customer support coverage.

3. Detailed Product Knowledge

RetailQ (Retail Execution Platform) RetailQ is an AI-driven platform designed for the FMCG sector to verify store reality. It helps brands stop guessing about stock levels by using AI to analyze photos from shops, instantly tracking shelf availability, planogram compliance, and field team attendance. It features facial recognition for fraud-proof field force attendance and automated "Strike Rate" scoring. It tracks competitor visibility and shelf share alongside your own products.

Security Surveillance & Response System This system turns passive security cameras into active defenders. It uses AI to detect weapons, fire, and agitated crowd behavior in real-time. It connects to physical hardware to trigger searchlights or sirens automatically to deter intruders. Deployment of this system has been proven to reduce security manpower requirements by **40%** for defense clients.

CIVMS (Central Intelligent Video Management System) CIVMS creates a unified dashboard for managing video feeds across multiple sites, bringing order to video operations. It works with various camera brands like Dahua and Hikvision. It allows security teams to search for specific events (like "red truck" or "person with backpack") across hundreds of cameras in seconds, centralized in one cloud-accessible view.

OxyChat (Enterprise GenAI Assistant) OxyChat is a secure internal knowledge assistant built for high-risk industries like Oil & Gas. It uses Retrieval-Augmented Generation (RAG) to read internal technical manuals, SOPs, and safety reports. It allows engineers to ask complex questions in plain English and receive instant, verified answers with direct citations to the original documents.

Syncoria (ERP Automation) Syncoria is a workflow assistant designed for Odoo ERP teams to complete routine tasks faster. It allows users to execute tasks—like creating invoices or checking inventory—using natural language commands instead of navigating complex menus. It simplifies navigation and ensures consistent data entry across finance and operations teams.

Kotha Voice Agent Kotha is a conversational AI voice agent for customer support that enables faster first responses. It handles routine high-volume calls, such as balance checks or service

status, without keeping customers on hold. It understands natural speech intent and features a smart handoff system that transfers complex emotional issues to human agents with full context.

TaxGPT (Audit & Compliance) TaxGPT helps audit firms and finance teams navigate complex regulations with faster knowledge work. It instantly retrieves relevant tax codes and generates professional summaries or first drafts of compliance reports. This tool significantly reduces research time and ensures consistency in regulatory reporting across cross-border operations.

AI HRMS AI HRMS is a Human Resource Management System that supports HR teams with clearer workflows. It automates repetitive HR tasks like leave requests and onboarding. It provides leadership with predictive analytics regarding workforce retention risks and helps employees get instant answers to policy questions.

UNDP Disaster Prebunk App This is a trust and misinformation defense platform developed for the UNDP. It verifies weather alerts and helps prebunk rumors during disasters like cyclones. It features a misinformation vault and a guided flow to help users verify facts before sharing them.

4. Detailed Service Knowledge

AI & ML Engineering We build production-grade AI systems that solve actual business problems, moving clients from "proof of concept" to reliable software. Our services include custom model development, MLOps, data pipeline engineering, and legacy system integration. We design architectures that handle real traffic and security requirements.

GenAI Solutions & Integration We design secure Generative AI systems that run on private infrastructure. We focus on "Responsible AI" to prevent data leaks. Our solutions include enterprise knowledge assistants, intelligent software copilots, and automated document analysis tools that integrate directly into platforms like Slack, Teams, or ERPs.

Data Annotation & Labelling We provide the high-precision training data required to build accurate AI models. We use a managed workforce of over 200 experts, not crowdsourcing. Our capabilities include **Image Annotation** (bounding boxes, segmentation), **Video Annotation** (motion tracking), **Audio Transcription** (speech-to-text), **Medical Annotation** (CT/MRI segmentation), **LiDAR Annotation** (3D point clouds), and **Geospatial Annotation** (satellite imagery).

Staff Augmentation We solve the tech talent gap by providing pre-vetted, senior AI engineers and developers who act as your own team. We handle recruitment, HR, payroll, and daily management. Clients can hire specific roles like Computer Vision Engineers, Python Developers, or Data Scientists who integrate seamlessly into their remote teams.

Custom AI Product Development We offer full-cycle software development for clients who want to build proprietary AI products. From discovery and architecture to UI/UX design and final deployment, we build the platform and hand over the code and intellectual property to the client.

5. Completed Projects & Use Cases

U-Lens (Unilever Bangladesh) We deployed a complete field force automation ecosystem for Unilever to manage execution across 500,000+ retail outlets. The system uses AI to verify retail execution, including biometric attendance to prevent fake visits and specialized modules to track "Share of Sachet" and "Share of Shelf". It ensures 100% data integrity by blocking users from ending their day until valid visual evidence is uploaded.

Military Base AI Sentry For a high-security defense facility, we automated perimeter security using AI that identifies firearms and sharp weapons instantly. It replaced the need for constant human monitoring, reducing the required guard force by 40% and cutting threat reaction time from minutes to seconds.

Medical AI Projects We have worked on specialized medical AI projects, including **Skin Disease Classification** for Doctor AI and **Diabetic Retinopathy Classification** for Smart Retina. These systems help doctors diagnose conditions faster by pre-screening medical images.

Vehicle Classification We developed vehicle classification systems for **Lynkeus AI**, aiding in traffic monitoring and autonomous system training.

6. Contact Information & Locations

Global Headquarters (Singapore) 25, Sin Ming Walk, Thomson Grand, Singapore 573917.

Global Operations Hub (Bangladesh)

- **Primary Office:** House - 57, Dhanmondi 15/A, Dhaka 1209, Bangladesh.
- **Registered Address:** Lane - 2, House - 191, Baridhara DOHS, Dhaka 1206, Bangladesh.

Contact Channels

- **General Inquiries:** contact@thedataisland.com.
